<http://www.bluetooth.com/Pages/Bluetooth-Smart-Devices-List.aspx>

Also your Android device should have an Android OS version 4.3 and later.

Getting Started

Make sure to read Important Safety Information. Installation is straightforward:

1. Download the iCelsius App (for free) from the App Store (for iOS device) or Google Play Store (for Android device).

2. Go to your device settings and ensure Bluetooth is enabled.

3. Open the iCelsius App. Go to the app settings in the menu and enable Bluetooth. iCelsius App will immediately start scanning for available Bluetooth devices.

4. To start the iCelsius Blue, first open the battery cover and pull out the plastic tab between the cell and the terminal. Close the battery cover and press the power button.

The LED on the iCelsius will blink green. It means that the device started to broadcast. Once detected by your phone or tablet, your device will ask you permission to pair with the iCelsius Blue. Select "Yes" or "OK" to complete first time pairing.

5. Start sensing with iCelsius Blue (live screen will display sensor reading).

3

Front Panel

The iCelsius Blue has only one button to wake it up and start broadcasting, which allows it to be linked with the iOS/Android device.

LED

Fast green blink (4 times per second) – iCelsius Blue has just been powered on and is ready to connect to your device.
 Slow green blink (once per second) – iCelsius Blue is paired with a device and is transmitting temperature.
 Solid Green (1 second) – iCelsius Blue is going into sleep mode.
 Off – iCelsius is in sleep mode. It can be powered back on by pressing the button.

Battery

The App indicates the battery percentage. To replace the battery use a CR2032 coin cell. Remove the cover and wedge out the cell as illustrated in Fig1 & 2. Further instructions can be found at <http://www.icelsius.com/support.php>

Adjusting the Operation Mode

iCelsius Blue sensors feature two different operating modes which can be toggled from the Settings/Connectivity menu.

1. Battery Save: once turned on using the pushbutton, the sensor will broadcast for a couple of minutes and then go back to sleep if no connection is made. Also, when connected and transmitting temperature, once the app is closed the sensor instantly goes back to sleep. This is the default mode of all sensors except the iCelsius Blue BBQ.

2. Always On: once turned on using the pushbutton, the sensor will always broadcast until a connection is made or the button is pushed again to power it off. Also, when connected and transmitting temperature, if the connection goes down the sensor will keep broadcasting so that the app can quickly and easily reconnect to it again. This is the default mode of the iCelsius Blue BBQ
